Experience

Amazon Web Services (AWS) / Software Development Engineer II / Seattle, Washington

Sep 2022 - Present

- Automated **94K+ cross-year transactions** previously recreated and submitted manually by designing a fault-tolerant pipeline with independently retryable stages, persistent state, consistency checks, monitoring, and redrive tooling.
- Scaled bulk transaction processing from **~1K to 100K records** by replacing upfront resolution with checkpointed streaming jobs and redesigning DynamoDB partitioning and progress tracking to eliminate hot partitions and write contention.
- Built a rule-evaluation system that precomputes valid customer-attribute combinations across a hierarchical model, using dependency-ordered parallel processing and OpenSearch indexing to power low-latency suggestions and backend validation.
- Led development of a shared editing engine used across frontend and backend workflows, extracting validation, recalculation, transaction policy, and submission logic from the browser to eliminate duplicated implementations and enable server-side automation.
- Co-designed a transaction scheduler that groups overlapping operations using a **disjoint-set data structure**, serializing dependent transactions while executing independent groups concurrently to prevent ordering-dependent invalid state.

Highlight / Software Developer Contractor / Remote

Jan 2022 - May 2022

- Built product and backend functionality for an open-source observability platform using **Go, GraphQL, PostgreSQL, React, and TypeScript**.

Amazon / Software Development Engineer Intern, Fire OS Multimedia / Sunnyvale, California

Summer 2021

- Developed a camera driver enabling wireless cameras to work with third-party applications on Fire TV devices.

Nepris (now Pathful) / Software Developer Contractor / Frisco, Texas

Jun 2019 - May 2021

- Migrated a legacy .NET/JSP application toward **React and Next.js**, building routing infrastructure that allowed legacy and modern experiences to coexist during the transition.

Audible / Software Development Engineer Intern / Newark, New Jersey

Summers 2019 & 2020

- Built **Java/Spring** services for audiobook recommendations on Amazon.com and an Alexa skill using Lambda, Node.js, and TypeScript.

Projects

Graded / geoot.com/graded

- Built and scaled a mobile grade-tracking application to **35K+ daily active users** across Texas school districts; acquired by GradePro.

Education

Texas A&M University / College Station, Texas

- B.S. Computer Science, Minor in Business

Skills

Languages: TypeScript, JavaScript, Java, Python, Go, SQL

Technologies: AWS, DynamoDB, Lambda, SQS, OpenSearch, PostgreSQL, Node.js, React, GraphQL
